

**TCQ**

**Credit risk management**

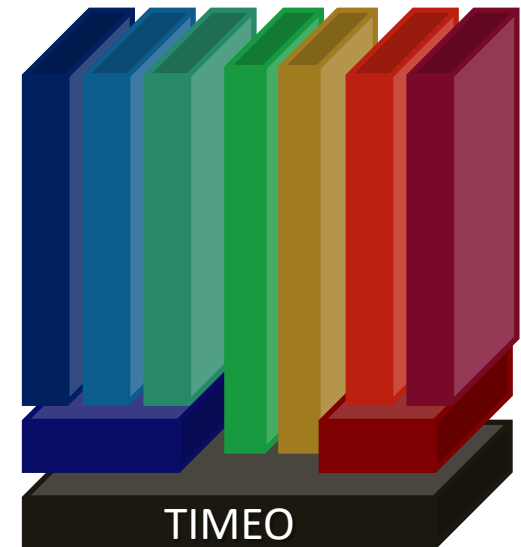

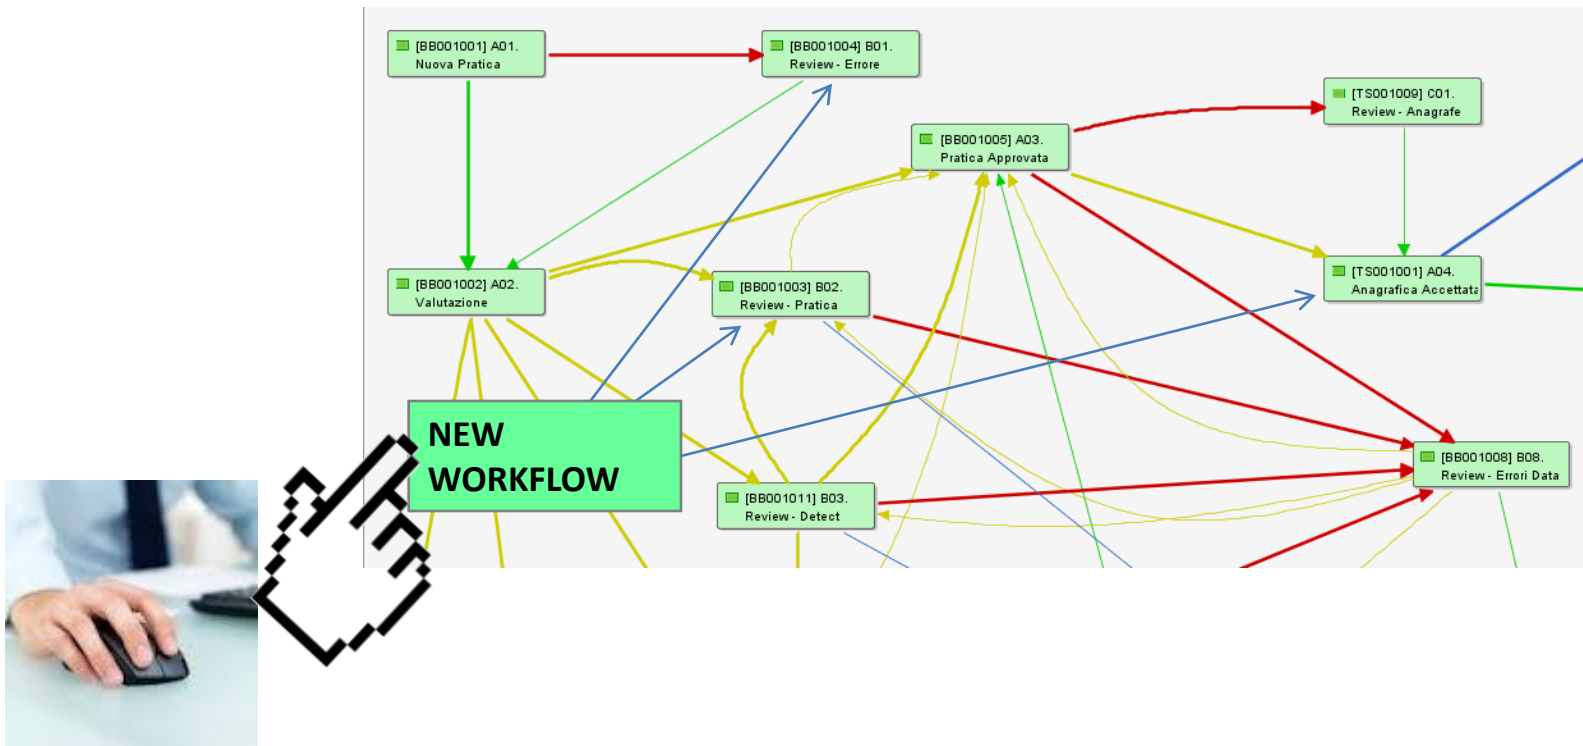

**Timeo** is the framework underlying the modules that make up the platform for managing the credit cycle.

It is modular, flexible, customizable and extensible over time and totally web.

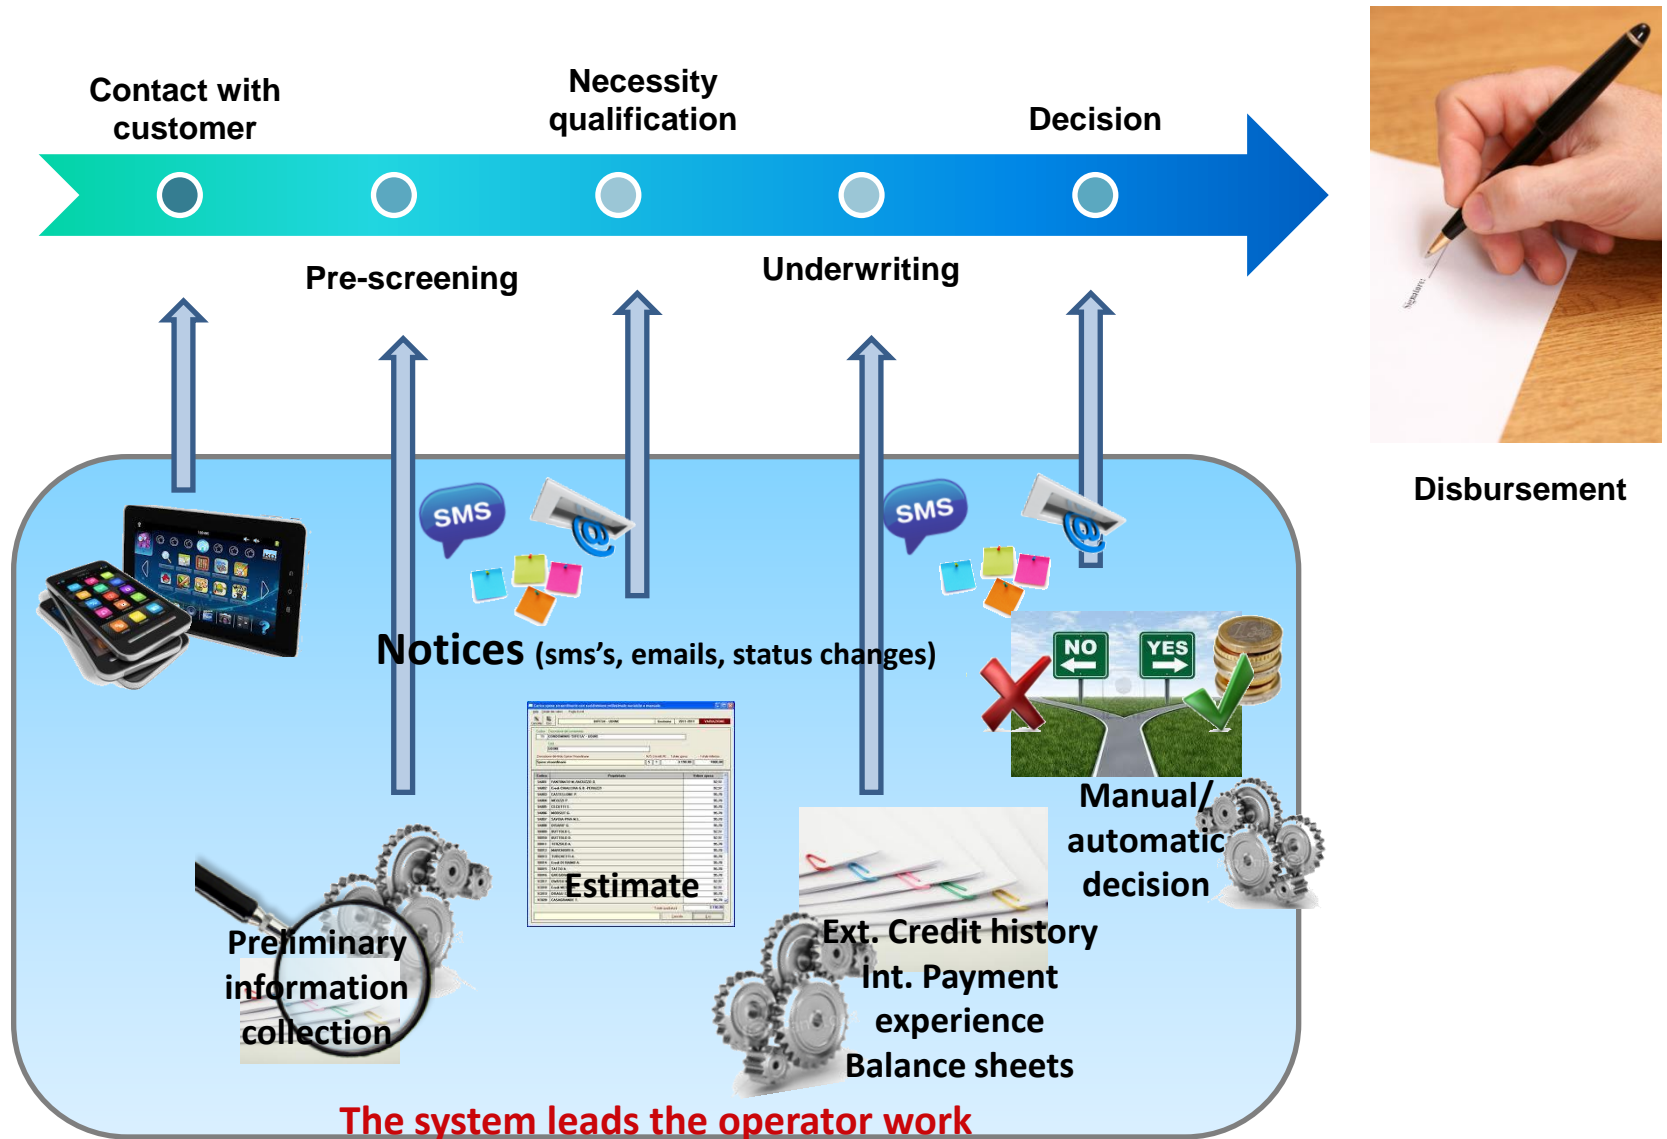

**Timeo** is the platform where:

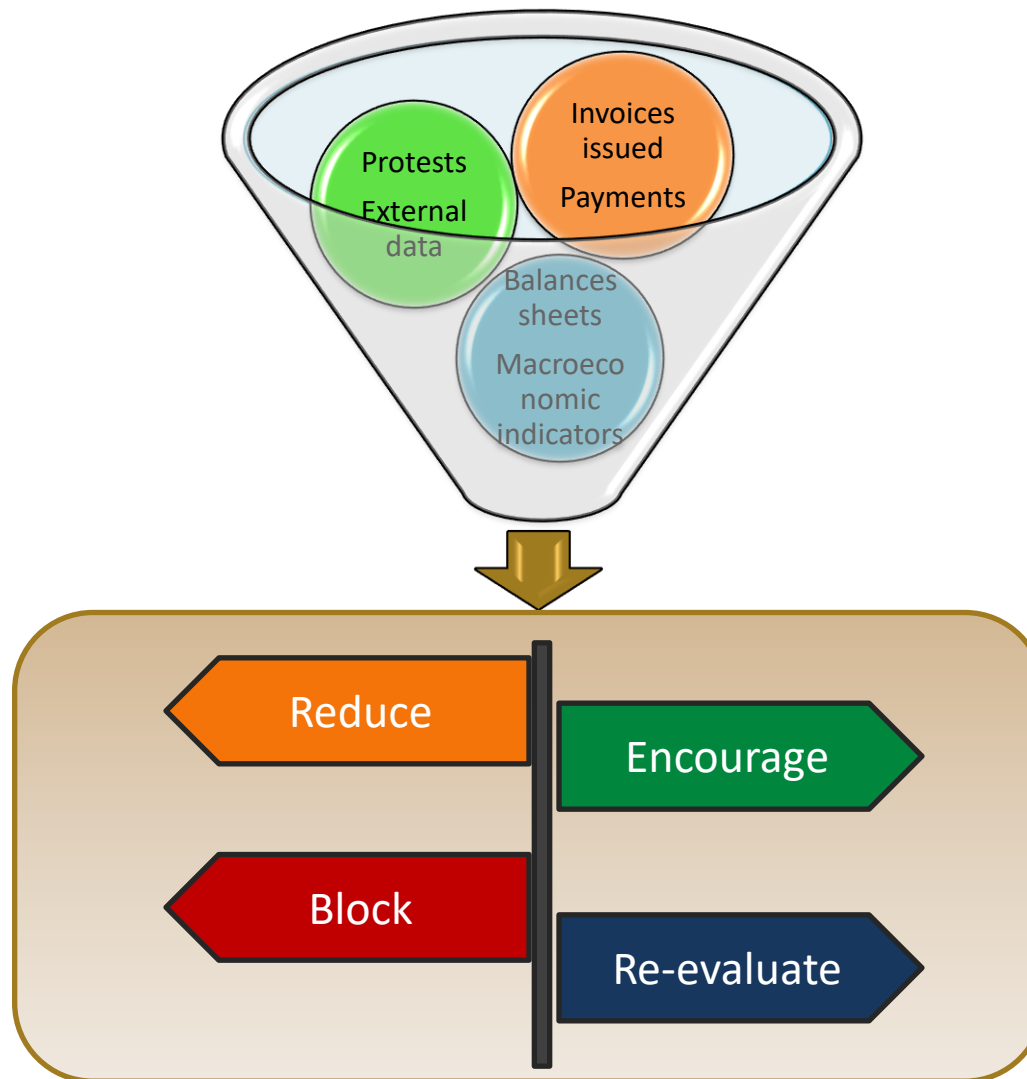

- processes are defined (Workflow Engine)
- business rules are defined (Business Rule Engine)
- integration takes place with the other systems which are already present in the company (SOA)
- users, profiles, languages and countries are configured

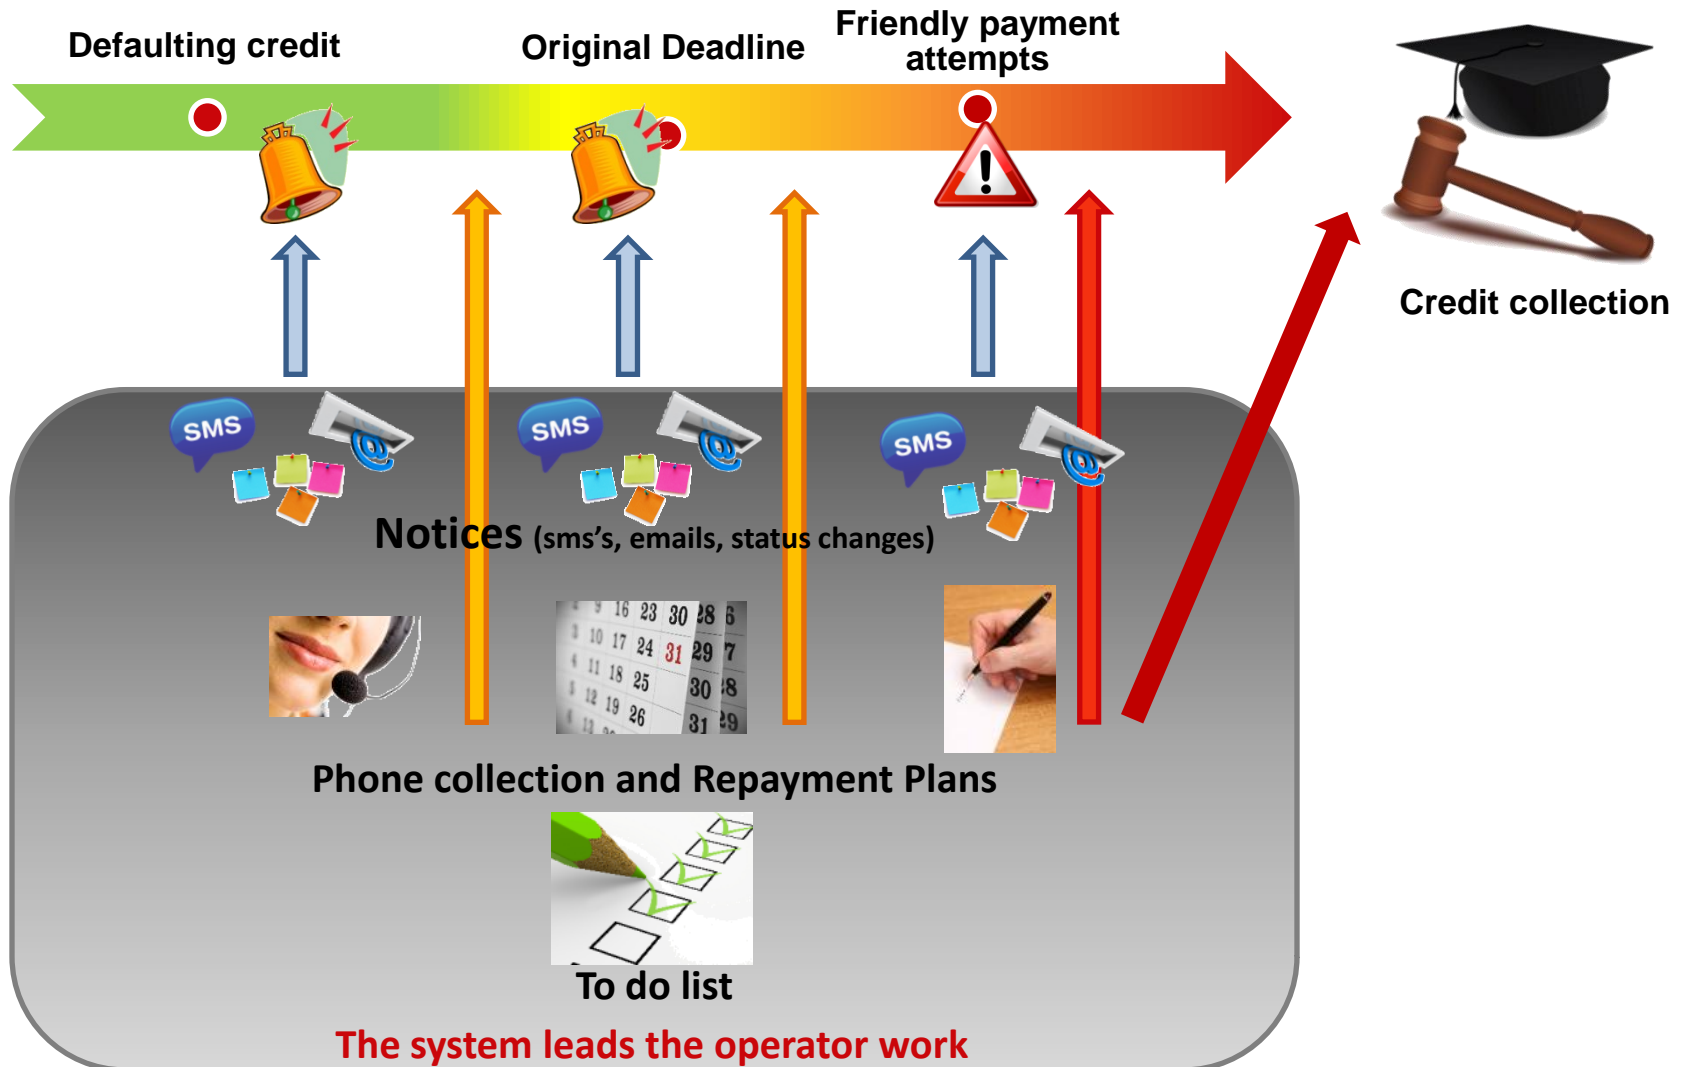

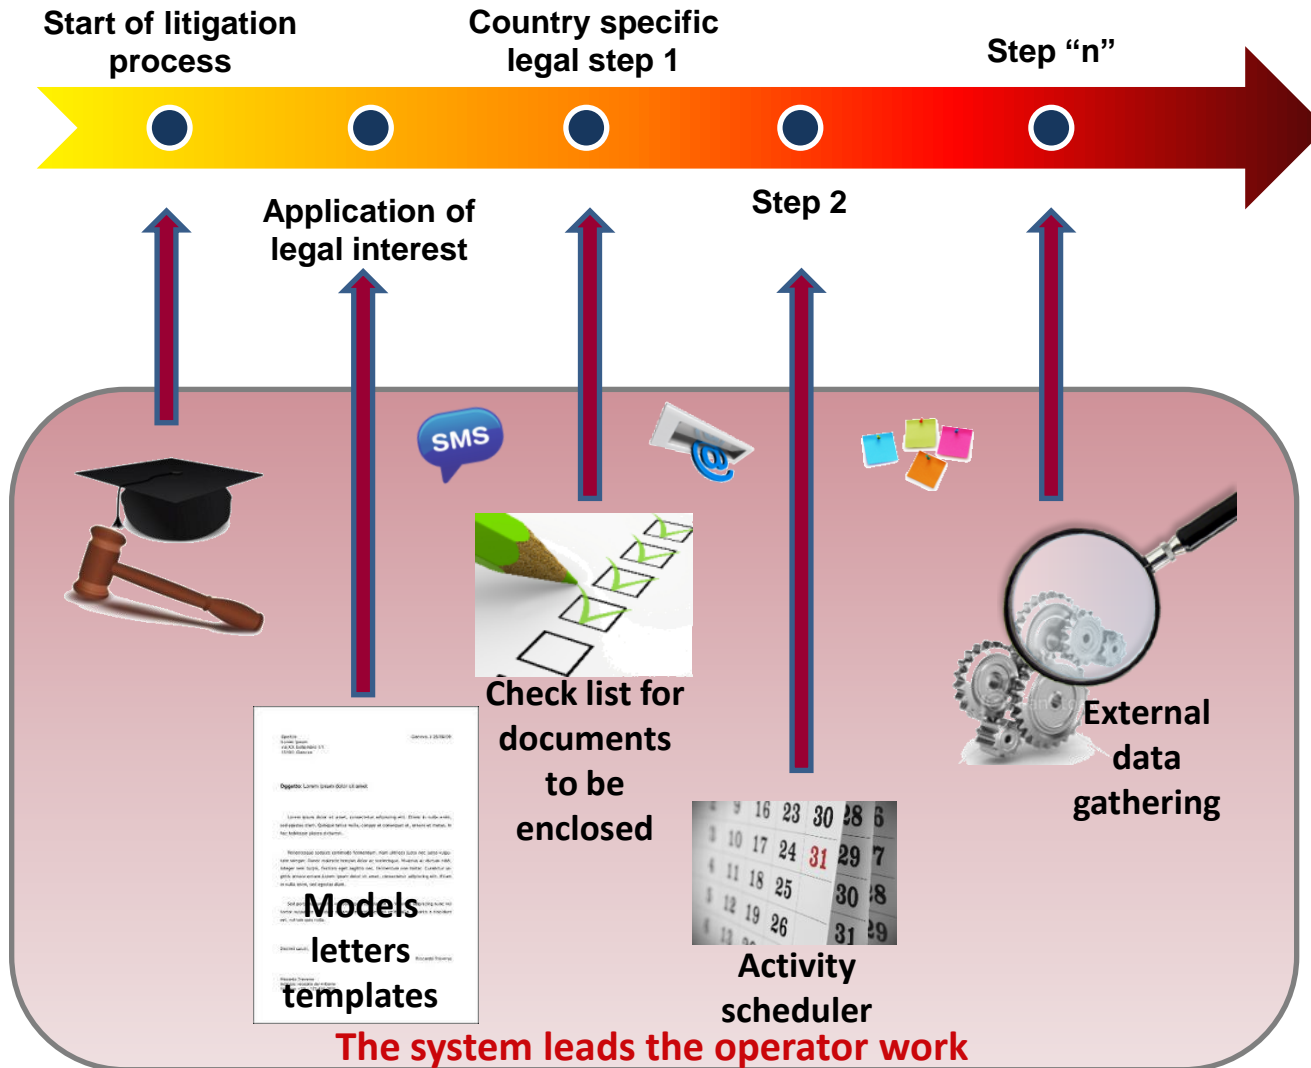

No need to use IT people to configure the models that users will have to comply with

**The system leads the operator work**
